scanCONTROL // 2D/3D Laser profile sensors

Powerful 2D/3D laser scanners

scanCONTROL 30x2

-  Precise profile measurements for industrial measurement tasks
-  Resolution x-axis: 1,024 points
-  Profile frequency up to 10,000 Hz
-  For small and large measurement areas
-  Also available with patented Blue Laser Technology
-  Compatible with **COGNEX® VisionPro**

Precise 2D/3D profile measurements

The new LLT30x2 laser profile scanners provide calibrated profile data with up to 7.9 million points per second. They allow profile frequencies up to 10 kHz and resolutions up to 1,024 points. Thanks to their high accuracy and versatility, the scanners are particularly suitable for static and dynamic applications as well as robotic applications. They measure and evaluate, e. g., angles, steps, gaps, distances, and circles.

Available as PROFILE and SMART versions

The scanCONTROL 30x2 series is available as PROFILE and SMART versions. PROFILE scanners provide calibrated profile data that can be further processed on a PC using software provided by the customer. With the 3DInspect software, the scanCONTROL sensors can also be used for 3D evaluations. SMART series scanners work independently and provide selected measurement values. The scanCONTROL 30x2 series supports all SMART functions and programs that are set in the scanCONTROL Configuration Tools software and directly stored in the internal controller.

LLT30xx					

Laser options*

	/SI	Hardware switch-off of the laser line
	/3R	Increased laser power (class 3R) e.g., for dark surfaces
	/BL	Blue laser line (405 nm) for (semi-) transparent, red-hot glowing and organic materials (Measuring ranges 25 - 100 mm)

Cable outlet options*

	/RT	Cable outlet on the rear side ("Rear Tail") for space-saving installation, cable length 0.3 m. Sockets at cable end (Measuring ranges 25 - 200 mm)
	/PT	Cable directly out of the sensor ("Pigtail") Available lengths: 0.3 / 0.6 / 1.00 m

*Options can be combined

Accessories from page 39

The easy way of machine integration

The design of the LLT30x2 series is compact and lightweight. The controller is integrated in the sensor itself, which simplifies mechanical integration. The measurement data can be output directly.

Large measurement area up to 600 x 600 mm

The scanCONTROL 30x2 laser scanners are now also available with a large measuring field up to 600 x 600 mm. This allows large objects to be detected with high accuracy.

Application examples

Assembly monitoring of car body shell construction

Detection of the road surface profile

Geometry inspection in metals processing

Powerful 2D/3D laser scanners with highest precision

scanCONTROL 30x0

-  High resolution in x- and z-axis for accurate profile measurement
-  Profile frequency up to 10 kHz for monitoring of dynamic processes
-  Innovative exposure control
-  For small and large measurement areas
-  Also available with patented Blue Laser Technology
-  Compatible with **COGNEX® VisionPro**

Fast and precise 2D/3D profile measurements

The new LLT30x0 laser profile scanners provide calibrated profile data with up to 9.6 million points per second. Thanks to their high accuracy, high profile frequency and versatility, these powerful scanners are suitable for demanding measurement tasks. They measure and evaluate, e.g., angles, steps, gaps, distances and circles with high precision. These sensors also offer predefined operating modes that enable optimal results for various applications.

Available as PROFILE and SMART versions

The scanCONTROL 30x0 series is available as PROFILE and SMART versions. PROFILE scanners provide calibrated profile data that can be further processed on a PC using software provided by the customer. With the 3DInspect software, the scanCONTROL sensors can also be used for 3D evaluations. SMART series scanners work independently and provide selected measurement values. The scanCONTROL 30x0 series supports all SMART functions and programs that are set in the scanCONTROL Configuration Tools software and directly stored in the internal controller.

Accessories from page 39

Innovative exposure control to master difficult surfaces

On inhomogeneous or dark surfaces, the HDR (High Dynamic Range) data acquisition mode and the improved auto exposure optimizes the measurement results.

In HDR mode, the rows of the sensor matrix are exposed differently but at the same time which avoids time offsets between the recordings. This is how moving objects can be detected reliably. The areas for auto-exposure can also be selected individually.

High resolution

High dynamic range

High speed

Fast measurement results with operation modes

Choose from three predefined operating modes for your specific measurement task: "High-Resolution" for maximum precision, "High Dynamic Range" for optimal profile detection on difficult surfaces and "High Speed" for ultra-fast measurements.

Large measurement area up to 600 x 600 mm

The scanCONTROL 30x0 laser scanners are now also available with a large measuring field up to 600 x 600 mm. This allows measuring objects to be detected with high accuracy.

Application examples

Planarity of coated battery film

Assembly monitoring of battery packs

Inline 3D inspection of tire geometry

Software for scanCONTROL SMART sensors

SMART

scanCONTROL Configuration Tools

Solution of complex 2D measurement tasks

- Can be used with all SMART sensors
- Sensor alignment and adjustment
- 16 measuring programs x 8 evaluations per parameter set
- 15 independent parameter packages can be stored in the sensor
- Data processing
- Logical operations for digital outputs
- Configuration of the measurement value transfer and the outputs

scanCONTROL Result Monitor

Visualization of measurement sequences

- For up to 4 scanCONTROL SMART sensors
- Display of profile and measured value history during operation
- Adjustable layout (different views, e.g. for workers)
- Parallel transmission of the measured values to the control unit is possible and recommended
- Logging and saving of profiles

scanCONTROL UDP Tool

Testing the UDP output of measured values

- For all scanCONTROL SMART sensors
- Logging possible up to 1,000 Hz
- Source code available

scanCONTROL Modbus Tool

Testing the Modbus communication

- For all scanCONTROL SMART sensors
- Transfer of measured data
- Sensor control via Modbus TCP
(load user modes, laser on/off, change exposure time, ...)

Integration of scanCONTROL sensors

SMART

PROFILE

Integration into customer software

- LLT.DLL and SDK for fast integration in C++ or C# (NET) applications
- LabVIEW device driver
- Various example VIs (profile transmission, container mode, ...)
- Comprehensive documentation
- Linux integration
 - Based on GigE Vision/GenICam API
 - Fast integration via additional C++ library
 - Various sample programs
 - Comprehensive documentation
- Cognex VisionPro
 - AIK adapter for fast integration via Cognex AIK server
 - Cognex Range Images can be generated and processed based on the scanCONTROL measuring points
- Others on request

scanCONTROL Developer Tool

Complete integration example (demo tool)

- Source code available (QML / C++, usable for Windows and Linux)
- Serves as support for the development of own software with scanCONTROL sensors
- MouseOver over the sensor parameters directly displays the corresponding function in the LLT.DLL
- All data transmission options can be set and tested

Integration into image processing software

Easy integration due to GenICam/GigE Vision standard

- Direct connection to compatible 3D and image processing software possible
- Sensor is recognized by the standard and parameters are read out directly
- scanCONTROL 25/29xx: output in 2.5D
- scanCONTROL 30xx: output in Valid3D (corresponds to coord3D data formats)

Easy integration due to GigE Vision standard

- 3D comparisons and measurement
- Integration into various software solutions via GigE Vision possible
- Detection of fine surface defects
- OCR/text recognition independent of contrast
- Completeness, position detection, planarity, ... and much more!

GEN*i*CAM **GigE VISION**

Software 3DInspect

Intuitive user interface

Real 3D evaluation, not just 2.5D

Object extraction in 3D

Direct feedback with algorithms

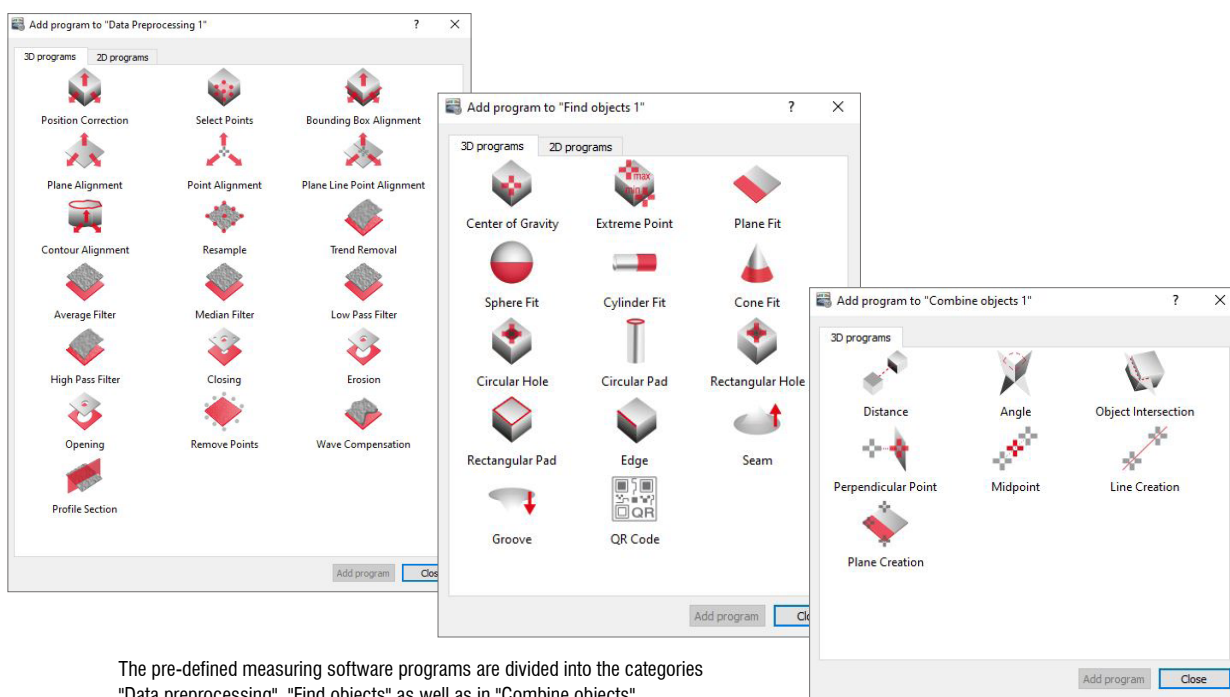

Compatible with all 3D sensors
from Micro-Epsilon

3DInspect

3DInspect software for 3D measurement and inspection tasks

The 3DInspect software is a powerful tool for sensor parameter set up and industrial measurement tasks. This software transmits the measurement data from the sensor via Ethernet and provides the data in three-dimensional form. The 3D data is then further processed on the PC using 3DInspect measurement programs, evaluated, assessed and, if necessary, logged and transmitted to a control unit via Ethernet. The 3D data can also be saved with the software. In addition to the scanCONTROL 30xx models, the 3DInspect software is also supported by the 3D Profile Unit and the surfaceCONTROL and reflectCONTROL sensors.

The pre-defined measuring software programs are divided into the categories "Data preprocessing", "Find objects" as well as in "Combine objects".

Industrial Performance Unit: Industrial PC with GigE Vision Sensors

The Industrial Performance Unit is a powerful computing platform for 3D applications. The scanner can be parameterized directly via the 3DInspect software, allowing measurements to be started immediately. Results can be output via the integrated interfaces RPOFINET, EtherCAT and EtherNet/IP.

Valid3D technology from Micro-Epsilon vs. conventional 2.5D systems

The unique Valid3D technology enables lossless display and processing of the point clouds. This is how scanned 3D objects can be moved arbitrarily in the coordinate system.

Valid3D: Real 3D without data loss

Point cloud after turn

3DInspect with Valid3D

- Real 3D image of test object without data loss
- Analysis and evaluation of complete test object

Common 3D software

- Algorithms based on 2.5D
- Only one z-coordinate per x/y coordinate possible
- Data loss during data processing

System for multi-scanner applications

3D Profile Unit

micro-epsilon.com/3DPU

Profile stitching for up to 2 sensors

3D Profile Unit Controller

Powerful industrial computer

- Communication with any GigE Vision clients
- Direct integration into image processing software
- Transfer of profile data or 3D point clouds
- Data evaluation and system parameterization is implemented in the 3DInspect software
- Optionally available with Industrial Ethernet:
 - Integrated evaluation
 - Transfer of measured values to PLC
 - Industrial Ethernet interface for control and transfer of measured values

Measuring stand with sensor adapter board, flexible rod and clamp base

3D sensors for the inspection of shapes and surfaces

surfaceCONTROL 3D 3500

Innovative 3D snapshot sensor for inline inspection of geometry, shapes and surfaces

3DInspect

Highest repeatability up to $0.25 \mu\text{m}$

Best Z-axis resolution from $0.7 \mu\text{m}$

Up to 2.2 million 3D points / second

Easy integration in all common 3D image processing packets

reflectCONTROL

3D inline inspection of shiny surfaces: flat glass, mirrors and wafers

Highest repeatability $\pm 1 \mu\text{m}$

Detects minor deviations $>10 \text{ nm}$

3DInspect: Powerful evaluation software with intuitive operating concept

Easy integration in all common 3D image processing packets

3DInspect

Sensors and Systems from Micro-Epsilon

Sensors and systems for displacement, position and dimension

Sensors and measurement devices for non-contact temperature measurement

Measuring and inspection systems for quality assurance

Optical micrometers, fiber optics, measuring and test amplifiers

Color recognition sensors, LED Analyzers and inline color spectrometers

3D measurement technology for dimensional testing and surface inspection
